# MthSc 208: Differential Equations (Fall 2011) In-class Worksheet 2c: Mixing problems 

## NAME:

Write down an initial value problem for each of the following mixing problems.

1. A tank contains 100 gallons of water, in which 20 oz of salt is dissolved. Water with a concentration of $3 \mathrm{oz} / \mathrm{gal}$ flows into the tank at a rate of $5 \mathrm{gal} / \mathrm{min}$, and water drains from the tank at the same rate.
2. A tank contains 100 gallons of salt water that has a salt concentration of $1 \mathrm{oz} / \mathrm{gal}$. Fresh water flows into the tank at a rate of $5 \mathrm{gal} / \mathrm{min}$, and water drains from the tank at $7 \mathrm{gal} / \mathrm{min}$.
