

Learning Activity 1: Section 1.1  
8/29/2006

1.  $f(x) = 2x + 3$

Numerical description:

x	f(x)
-10	-17
-8	-13
-6	-9
-4	-5
-2	-1
0	3
2	7
4	11
6	15
8	19
10	23

Domain:  $[-10, 10]$ ,  
Range:  $[-17, 23]$ .

The function is increasing on the interval  $[-10, 10]$ , and is never decreasing.

The function is neither even—since  $f(-2) \neq f(2)$ —nor odd—since  $f(-2) \neq -f(2)$ .

The function is a linear function, which is a special case of polynomial, rational, and algebraic functions.

2.

$$f(x) = (x - 3)^3$$

$$= x^3 - 9x^2 + 27x - 27$$

Numerical description:

x	f(x)
-10	-2197
-8	-1331
-6	-729
-4	-343
-2	-125
0	-27
2	-1
4	1
6	27
8	125
10	343

Domain:  $[-10, 10]$   
Range:  $[-2197, 343]$

The function is increasing on the intervals  $[-10, 3)$  and  $(3, 10]$ , and is never decreasing.

The function is neither even—since  $f(-2) \neq f(2)$ —nor odd—since  $f(-2) \neq -f(2)$ .

The function is a polynomial, which is a special case of rational and algebraic functions.

3.

$$f(x) = (2 - (1 - x)^2)^{-1/2}$$

$$= \frac{1}{\sqrt{1 + 2x - x^2}}$$

Numerical description:

x	f(x)
$1 - \sqrt{2}$	undefined
$1.1 - \sqrt{2}$	1.914449085
$\sqrt{2} - 1.1$	.8085321580
1	$\sqrt{2}/2 \approx .707$
$2.5 - \sqrt{2}$	0.708411338
$3.5 - \sqrt{2}$	1.103596937
$1 + \sqrt{2}$	undefined

Domain:  $(1 - \sqrt{2}, 1 + \sqrt{2})$   
Range:  $[\sqrt{2}/2, \infty)$

The function is increasing on the interval  $(1, 1 + \sqrt{2})$  and is decreasing on the interval  $(1 - \sqrt{2}, 1)$ .

The function is neither even—since  $f(1.1 - \sqrt{2}) \neq f(\sqrt{2} - 1.1)$ —nor odd—since  $f(1.1 - \sqrt{2}) \neq -f(\sqrt{2} - 1.1)$ .

The function is algebraic.
