

# MTHSC 3190 SECTION 4.23

Kevin James

## DEFINITION

A relation  $f$  is called a function provided that

$$(a, b), (a, c) \in f \Rightarrow b = c.$$

(-i.e. If  $(a, b) \in f$ , then  $\forall c \neq b, (a, c) \notin f$ .)

## DEFINITION

A relation  $f$  is called a function provided that

$$(a, b), (a, c) \in f \Rightarrow b = c.$$

(-i.e. If  $(a, b) \in f$ , then  $\forall c \neq b, (a, c) \notin f$ .)

## EXAMPLE

$f = \{(1, 3), (2, 5), (3, 6), (4, 7)\}$  is a function.

## DEFINITION

A relation  $f$  is called a function provided that

$$(a, b), (a, c) \in f \Rightarrow b = c.$$

(-i.e. If  $(a, b) \in f$ , then  $\forall c \neq b, (a, c) \notin f$ .)

## EXAMPLE

$f = \{(1, 3), (2, 5), (3, 6), (4, 7)\}$  is a function.

$Q = \{(1, 2), (2, 4), (1, 3), (5, 7)\}$  is not a function.

## NOTATION

If  $f$  is a function and  $(a, b) \in f$ , we write  $f(a) = b$ .

## NOTATION

If  $f$  is a function and  $(a, b) \in f$ , we write  $f(a) = b$ .

## EXAMPLE

So, with  $f$  as in our previous example,  
 $f(1) = 3$

## NOTATION

If  $f$  is a function and  $(a, b) \in f$ , we write  $f(a) = b$ .

## EXAMPLE

So, with  $f$  as in our previous example,

$$f(1) = 3$$

$$f(2) = \underline{\hspace{2cm}} \quad f(3) = \underline{\hspace{2cm}} \quad f(4) = \underline{\hspace{2cm}}$$

## NOTATION

If  $f$  is a function and  $(a, b) \in f$ , we write  $f(a) = b$ .

## EXAMPLE

So, with  $f$  as in our previous example,

$$f(1) = 3$$

$$f(2) = \underline{\hspace{2cm}} \quad f(3) = \underline{\hspace{2cm}} \quad f(4) = \underline{\hspace{2cm}}$$

## EXAMPLE

Express the integer function  $f(x) = x^3$  as a set of ordered pairs.

## DEFINITION

The domain and image of a function  $f$  are defined as follows.

$$\text{dom}(f) = \{a : (a, *) \in f\},$$

$$\text{im}(f) = \{b : (*, b) \in f\}.$$

## DEFINITION

The domain and image of a function  $f$  are defined as follows.

$$\text{dom}(f) = \{a : (a, *) \in f\},$$

$$\text{im}(f) = \{b : (*, b) \in f\}.$$

## EXAMPLE

Suppose that  $f = \{(1, 2), (2, 4), (3, 5), (4, 7), (5, 10)\}$ . What are the domain and image of  $f$ ?

## DEFINITION

The domain and image of a function  $f$  are defined as follows.

$$\begin{aligned}\text{dom}(f) &= \{a : (a, *) \in f\}, \\ \text{im}(f) &= \{b : (*, b) \in f\}.\end{aligned}$$

## EXAMPLE

Suppose that  $f = \{(1, 2), (2, 4), (3, 5), (4, 7), (5, 10)\}$ . What are the domain and image of  $f$ ?

## NOTATION

Suppose that  $f$  is a function and  $A$  and  $B$  are sets. We write

$$f : A \rightarrow B$$

to indicate that

$$\text{dom}(f) = A, \quad \text{and} \quad \text{im}(f) \subseteq B.$$

## SHOWING $f$ IS A FUNCTION

- 1 Check that  $f$  is a set of ordered pairs.
- 2 Suppose that  $(a, b), (a, c) \in f$ . Argue that  $b = c$ .

## SHOWING $f$ IS A FUNCTION

- 1 Check that  $f$  is a set of ordered pairs.
- 2 Suppose that  $(a, b), (a, c) \in f$ . Argue that  $b = c$ .

## SHOWING $f : A \rightarrow B$

To show that  $f : A \rightarrow B$ ,

- 1 Show that  $f$  is a function.
- 2 Show that  $\text{dom}(f) = A$  (using a set equality proof).
- 3 Show that  $\text{im}(f) \subseteq B$ .

### SHOWING $f$ IS A FUNCTION

- 1 Check that  $f$  is a set of ordered pairs.
- 2 Suppose that  $(a, b), (a, c) \in f$ . Argue that  $b = c$ .

### SHOWING $f : A \rightarrow B$

To show that  $f : A \rightarrow B$ ,

- 1 Show that  $f$  is a function.
- 2 Show that  $\text{dom}(f) = A$  (using a set equality proof).
- 3 Show that  $\text{im}(f) \subseteq B$ .

### EXAMPLE

Let  $f = \{(x, x^2) : x \in \mathbb{Z}\}$ . Show that  $f : \mathbb{Z} \rightarrow \mathbb{N}$ .

## PROPOSITION

Let  $A$  and  $B$  be finite sets. The number of functions  $f : A \rightarrow B$  is given by  $|B|^{|A|}$ .

## NOTATION

We denote the set of functions  $f$  from a set  $A$  to a set  $B$  by

$$B^A = \{f : A \rightarrow B\}.$$

## PROPOSITION

Let  $A$  and  $B$  be finite sets. The number of functions  $f : A \rightarrow B$  is given by  $|B|^{|A|}$ .

## NOTATION

We denote the set of functions  $f$  from a set  $A$  to a set  $B$  by

$$B^A = \{f : A \rightarrow B\}.$$

## PROOF.

## PROPOSITION

Let  $A$  and  $B$  be finite sets. The number of functions  $f : A \rightarrow B$  is given by  $|B|^{|A|}$ .

## NOTATION

We denote the set of functions  $f$  from a set  $A$  to a set  $B$  by

$$B^A = \{f : A \rightarrow B\}.$$

## PROOF.

## EXAMPLE

List all functions  $f : \{1, 2, 3\} \rightarrow \{4, 5\}$ .

## DEFINITION

A function is one-to-one (1-1) if whenever  $(x, b), (y, b) \in f$ ,  $x = y$ .

## DEFINITION

A function is one-to-one (1-1) if whenever  $(x, b), (y, b) \in f$ ,  $x = y$ .  
(-i.e.  $x \neq y \Rightarrow f(x) \neq f(y)$ .)

## DEFINITION

A function is one-to-one (1-1) if whenever  $(x, b), (y, b) \in f$ ,  $x = y$ .  
(-i.e.  $x \neq y \Rightarrow f(x) \neq f(y)$ .)

## PROPOSITION

*Let  $f$  be a function. The inverse relation  $f^{-1}$  is a function if and only if  $f$  is 1-1.*

## PROOF.

**Exercise.** □

## PROPOSITION

Suppose that  $f$  and  $f^{-1}$  are functions. Then

$$\begin{aligned} \text{dom}(f) &= \text{im}(f^{-1}), \\ \text{im}(f) &= \text{dom}(f^{-1}). \end{aligned}$$

PROOF.

**Exercise.**

## PROPOSITION

Suppose that  $f$  and  $f^{-1}$  are functions. Then

$$\begin{aligned} \text{dom}(f) &= \text{im}(f^{-1}), \\ \text{im}(f) &= \text{dom}(f^{-1}). \end{aligned}$$

## PROOF.

**Exercise.** □

## SHOWING A FUNCTION IS 1-1

**DIRECT METHOD** Suppose that  $f(x) = f(y)$ . Then argue that  $x = y$ .

**CONTRAPOSITIVE** Suppose that  $x \neq y$  then argue that  $f(x) \neq f(y)$ .

**CONTRADICTION** Assume for the sake of contradiction that  $f(x) = f(y)$  and  $x \neq y$ . Then argue to a contradiction.

## EXAMPLE

Let  $f(x) = 3x + 4$ . Show that  $f$  is 1-1.

## EXAMPLE

Let  $f(x) = 3x + 4$ . Show that  $f$  is 1-1.

## DEFINITION (ONTO)

Let  $f : A \rightarrow B$ . We say that  $f$  is onto if  $\text{im}(f) = B$ .

### EXAMPLE

Let  $f(x) = 3x + 4$ . Show that  $f$  is 1-1.

### DEFINITION (ONTO)

Let  $f : A \rightarrow B$ . We say that  $f$  is onto if  $\text{im}(f) = B$ .

### NOTE

We already know that  $\text{im}(f) \subseteq B$ .

## EXAMPLE

Let  $f(x) = 3x + 4$ . Show that  $f$  is 1-1.

## DEFINITION (ONTO)

Let  $f : A \rightarrow B$ . We say that  $f$  is onto if  $\text{im}(f) = B$ .

## NOTE

We already know that  $\text{im}(f) \subseteq B$ .

## PROVING ONTO

To prove  $f : A \rightarrow B$  is onto one may use either of the following methods.

**DIRECT METHOD** Let  $b \in B$ . Argue that there is  $a \in A$  such that  $f(a) = b$ .

**SUBSET METHOD** Show that  $B \subseteq \text{im}(f)$ .

## EXAMPLE

Let  $f : \mathbb{Z} \rightarrow \mathbb{Z}$  be defined by  $f(x) = x + 7$ . Show that  $f$  is onto.

### EXAMPLE

Let  $f : \mathbb{Z} \rightarrow \mathbb{Z}$  be defined by  $f(x) = x + 7$ . Show that  $f$  is onto.

### EXAMPLE

Let  $f : \mathbb{Q} \rightarrow \mathbb{Q}$  be defined by  $f(x) = 5x + 2$ . Is  $f$  1-1? Is it onto?

### EXAMPLE

Let  $f : \mathbb{Z} \rightarrow \mathbb{Z}$  be defined by  $f(x) = x + 7$ . Show that  $f$  is onto.

### EXAMPLE

Let  $f : \mathbb{Q} \rightarrow \mathbb{Q}$  be defined by  $f(x) = 5x + 2$ . Is  $f$  1-1? Is it onto?

### THEOREM

*Suppose that  $f : A \rightarrow B$ . Then  $f^{-1} : B \rightarrow A$  if and only if  $f$  is 1-1 and onto.*

### PROOF.

## DEFINITION

A function  $f$  is called a bijection if  $f$  is 1-1 and onto.

## DEFINITION

A function  $f$  is called a bijection if  $f$  is 1-1 and onto.

## EXAMPLE

$f(x) = x + 1$  is a bijection  $\mathbb{Z} \rightarrow \mathbb{Z}$ .

## DEFINITION

A function  $f$  is called a bijection if  $f$  is 1-1 and onto.

## EXAMPLE

$f(x) = x + 1$  is a bijection  $\mathbb{Z} \rightarrow \mathbb{Z}$ .

## PIGEON HOLE PRINCIPLE—

Let  $A, B$  be finite sets and let  $f : A \rightarrow B$ .

- 1  $f$  is 1-1  $\Rightarrow |A| \leq |B|$ .
- 2  $f$  is onto  $\Rightarrow |A| \geq |B|$ .

## DEFINITION

A function  $f$  is called a bijection if  $f$  is 1-1 and onto.

## EXAMPLE

$f(x) = x + 1$  is a bijection  $\mathbb{Z} \rightarrow \mathbb{Z}$ .

## PIGEON HOLE PRINCIPLE—

Let  $A, B$  be finite sets and let  $f : A \rightarrow B$ .

- 1  $f$  is 1-1  $\Rightarrow |A| \leq |B|$ .
- 2  $f$  is onto  $\Rightarrow |A| \geq |B|$ .

## NOTE

Take a moment to write the contrapositives of the above statements.

## COROLLARY

Let  $A, B$  be finite sets and let  $f : A \rightarrow B$ . If  $f$  is a bijection then  $|A| = |B|$ .

## PROOF.

## THEOREM

Suppose that  $A$  and  $B$  are finite sets with  $|A| = a$  and  $|B| = b$ .  
Then

$$\textcircled{1} \#\{f : A \rightarrow B\} = b^a.$$

$$\textcircled{2} \#\{f : A \rightarrow B \mid f \text{ is 1-1}\} = \begin{cases} (b)_a & \text{if } a \leq b, \\ 0 & \text{otherwise.} \end{cases}$$

$$\textcircled{3} \#\{f : A \rightarrow B \mid f \text{ is onto}\} = \begin{cases} \sum_{j=0}^b (-1)^j \binom{b}{j} (b-j)^a & \text{if } a \geq b, \\ 0 & \text{otherwise.} \end{cases}$$

$$\textcircled{4} \#\{f : A \rightarrow B \mid f \text{ is a bijection}\} = \begin{cases} a! & \text{if } a = b, \\ 0 & \text{otherwise.} \end{cases}$$
