

MTHSC 9520 Syllabus

Spring Semester 2017

Time: 9:30 - 10:45 ; Tu, Th.

Location: E-5 Martin Hall.

Instructor: Kevin James

Office: O-021 Martin Hall

Phone: (864) 656-6766 (office); (864) 656-3434 (Dept)

Email: kevja@clermson.edu

Web: www.math.clemson.edu/~kevja/

1 Office Hours:

Office hours are by appointment. Please email me for an appointment.

2 Texts

“Modular Functions and Dirichlet Series in Number Theory” by Tom M. Apostol

“Introduction to Analytic Number Theory” by Tom M. Apostol

“Problems in Analytic Number Theory” by M. Ram Murty

3 Course Description

The theory of Fourier analysis and complex analysis are essential to modern number theory. This course focuses on applications of this theory to number theory such as the proof of the prime number theorem and the connection of complex L-series to the distribution of primes and to arithmetic geometry.

4 Goals and Objectives

Students will develop a fundamental understanding of various analytic techniques and their application to number theory. More precisely students will gain the following.

1. Solid understanding of arithmetic and multiplicative functions.
2. Ability to give estimates on the growth rate and average growth rate of arithmetic functions.
3. Familiarity with basic summation techniques and their applications to estimates on arithmetic functions.

4. Familiarity with concepts from Fourier analysis and their applications in number theory, especially the proof of the prime number theorem.
5. Understanding of contour integration in complex analysis and applications to number theory which gives a second proof of the prime number theorem
6. Familiarity with zero-free regions of L-series and their connection with number theory, especially the Riemann hypothesis
7. Familiarity with elliptic functions and some applications
8. Familiarity with modular functions and some applications

5 Time Requirements

Please be sure to devote at least six hours per week outside of class to this course.

6 Grading Policies

The grading in this class will be as follows:

Homework	30%
Notes (in L ^A T _E X)	30%
Class Presentation	20%
Final Exam	20%

Notes and Homework will be collected weekly. You will maintain a accurate set of notes in L^AT_EX. Several problems will be posed in the course notes each week. You will select two per week for which you will provide solutions. These solutions will be posted in the appropriate place in the notes. In addition each student will be expected to give a class presentation on a topic in Analytic Number Theory.

A	90-100
B	80-99
C	70-79
D	60-69
F	<60

7 Attendance Policy

You are expected to be regular and punctual in your class attendance. You are expected to be in your seat at the beginning of the period and to remain through the period until dismissed.

If the instructor is late, the class should begin a review of homework problems. After 25 minutes, the class may leave.

8 Academic Integrity

As members of the Clemson University community, we have inherited Thomas Green Clemson's vision of this institution as a high seminary of learning. Fundamental to this vision is a mutual commitment to truthfulness, honor, and responsibility, without which we cannot earn the trust and respect of others. Furthermore, we recognize that academic dishonesty detracts from the value of a Clemson degree. Therefore, we shall not tolerate lying, cheating, or stealing in any form.
