

**MTHSC 208 (Differential Equations)**  
**Dr. Matthew Macauley**  
**HW 13**  
**Due Wednesday October 28th, 2009**

For full credit, be sure to *show your work* on all of these problems!

- (1) Find the Laplace transform of the following functions by explicitly computing  $\int_0^{\infty} f(t) e^{-st} dt$ .
- (a)  $f(t) = 3$
  - (b)  $f(t) = e^{3t}$
  - (c)  $f(t) = \cos 2t$
  - (d)  $f(t) = te^{2t}$
  - (e)  $f(t) = e^{-3t} \sin 2t$
- (2) Find the Laplace transform of the following functions by using a table of Laplace transforms
- (a)  $f(t) = -2$
  - (b)  $f(t) = e^{-2t}$
  - (c)  $f(t) = \sin 3t$
  - (d)  $f(t) = te^{-3t}$
  - (e)  $f(t) = e^{2t} \cos 2t$
- (3) Sketch each of the following piecewise defined functions, and compute their Laplace transforms.
- (a)  $f(t) = \begin{cases} 0, & 0 \leq t < 4 \\ 5, & t \geq 4 \end{cases}$
  - (b)  $f(t) = \begin{cases} t, & 0 \leq t < 3 \\ 3, & t \geq 3 \end{cases}$
- (4) Engineers frequently use the *Heavyside function*, defined by

$$H(t) = \begin{cases} 0, & t < 0 \\ 1, & t \geq 0 \end{cases}$$

to emulate turning on a switch at a certain instance in time. Sketch the graph of the function  $x(t) = e^{0.2t}$  and compute its Laplace transform,  $X(s)$ . On a different set of axes, sketch the graph of

$$y(t) = H(t - 3)e^{0.2t}$$

and calculate its Laplace transform,  $Y(s)$ . How do  $X(s)$  and  $Y(s)$  differ? What do you think the Laplace transform of  $H(t - c)e^{0.2t}$  is, where  $c$  is an arbitrary positive constant?
