

## Math 2080: Differential Equations

### Worksheet 7.7: The two-dimensional heat equation

NAME:

1. Consider the following initial/boundary value problem for the heat equation in a square region, where the function  $u(x, y, t)$  is defined for  $0 \leq x \leq \pi$ ,  $0 \leq y \leq \pi$  and  $t \geq 0$ .

$$\begin{aligned}u_t = c^2 \nabla^2 u, \quad & u(x, 0, t) = u(x, \pi, t) = u(0, y, t) = u(\pi, y, t) = 0 \\ & u(x, y, 0) = 2 \sin x \sin y + 5 \sin 2x \sin y.\end{aligned}$$

- (a) Briefly describe, and sketch, a physical situation which this models. Be sure to explain the effect of the boundary conditions and the initial condition.

- (b) Assume that there is a solution of the form  $u(x, y, t) = f(x, y)g(t)$ . Find  $u_{xx}$ ,  $u_{yy}$ , and  $u_t$ .

- (c) Plug  $u = fg$  back into the PDE and divide both sides by  $fg$  (i.e., “separate variables”) to get the *eigenvalue problem*. Briefly justify why this quantity must be a constant. Call this constant  $\lambda$ . Write down an ODE for  $g(t)$ , and a PDE for  $f(x, y)$  (the *Helmholtz equation*). Include four boundary conditions for  $f(x, y)$ .

- (d) Solve the Helmholtz equation and determine  $\lambda$ . You may assume that  $f(x, y) = X(x)Y(y)$ , then separate variables.

(e) Solve the ODE for  $g(t)$ .

(f) Find the general solution of the boundary value problem. It will be a superposition (infinite sum) of solutions  $u_{nm}(x, y, t) = f_{nm}(x, y)g_{nm}(t)$ .

(g) Find the particular solution to the initial value problem that additionally satisfies the initial condition  $u(x, y, 0) = 2 \sin x \sin y + 5 \sin 2x \sin y$ .

(h) What is the steady-state solution? Give a mathematical *and* intuitive (physical) justification.

2. Consider the following inhomogeneous BVP for the heat equation in a square region.

$$u_t = c^2 \nabla^2 u, \quad u(x, 0) = u(0, y) = 0, \quad u(x, \pi) = \sin x, \quad u(\pi, y) = \sin 2y.$$

Without knowing the initial conditions, determine the steady-state solution. (*Hint:* If you use your result from the previous worksheet, then almost no actual work is needed on this problem.)
