

2. Consider the function defined on $[0, \pi]$ by $f(x) = x(\pi - x)$. Sketch the even extension of this function and compute its Fourier cosine series. The following indefinite integral will be needed:

$$\int x(\pi - x) \cos(nx) dx = \frac{(n^2(\pi - x)x + 2) \sin nx + n(\pi - 2x) \cos nx}{n^3} + C.$$
