

Read the following, which can all be found either in the textbook or on the course website.

- Chapters 1 & 2 of *Visual Group Theory* (VGT).
- VGT Exercises 1.1–1.4, 1.8–1.12, 2.13–2.17.
- The article *Group Think* by Steven Strogatz, which appeared in the NY Times in 2010.
- Francis Su’s essay on good mathematical writing.

Write up solutions to the following exercises.

1. Answer the following questions after reading Francis Su’s essay on good mathematical writing.
  - (a) What is a good rule of thumb for what you should assume of your audience as you write your homework sets?
  - (b) Is chalkboard writing formal or informal writing?
  - (c) Why is the proof by contradiction on page 3 not really a proof by contradiction?
  - (d) Name three things a lazy writer would do that a good writer would not.
  - (e) What’s the difference in meaning between these three phrases?

“Let  $A = 12.$ ”

“So  $A = 12.$ ”

“ $A = 12.$ ”

2. Given a regular  $n$ -gon, let  $r$  be a rotation of it by  $2\pi/n$  radians. This time, assume that we are not allowed to flip over the  $n$ -gon. These  $n$  actions form a group denoted  $C_n = \langle r \rangle = \{e, r, r^2, \dots, r^{n-1}\}$ .
  - (a) Draw a Cayley diagram for  $C_n$  for  $n = 4$ ,  $n = 5$ , and  $n = 6$ .
  - (b) For  $n = 4, 5, 6$ , find all minimal generating sets of  $C_n$ .
  - (c) Make a conjecture of what integers  $k$  does  $C_n = \langle r^k \rangle$  for a general fixed integer  $n$ .
3. As we saw in lecture, the six symmetries of an equilateral triangle  form a group denoted  $D_3 = \{e, r, r^2, f, rf, r^2f\}$ , where  $r$  is a  $120^\circ$  clockwise rotation and  $f$  is a flip about a vertical axis (which fixes the top corner). Since  $r$  and  $f$  suffice to generate all six of these symmetries, we write  $D_3 = \langle r, f \rangle$ .
  - (a) Let  $g$  be the reflection of the triangle that fixes the lower-left corner. Which of the six actions in  $D_3$  is  $g$  equal to? Which action is  $fg$ ?
  - (b) Write all 6 actions of  $D_3$  using only  $f$  and  $g$ . Draw a Cayley diagram using  $f$  and  $g$  as generators.
  - (c) To generate  $D_3$ , we need at least 2 actions. It is not difficult to show that if we have 3 generators, then one of them is unnecessary. Find all *minimal* generating sets of  $D_3 = \{e, r, r^2, f, rf, r^2f\}$ ; note that all of them should have exactly two actions. Do not use  $g$  in this list.

4. The eight symmetries of a square  $\begin{bmatrix} 1 & 2 \\ 4 & 3 \end{bmatrix}$  form a group denoted  $D_4$ . Let  $r$  be a  $90^\circ$  clockwise rotation and  $f$  a horizontal flip (that is, about a vertical axis). It is not difficult to show that  $D_4 = \langle r, f \rangle$ .
- (a) Write all 8 actions of  $D_4$  using  $r$  and  $f$  and draw a Cayley diagram using these two actions as generators.
  - (b) Let  $g$  be the reflection of the square that fixes the lower-left and upper-right corner. Which of the six actions in  $D_3$  is  $g$  equal to? Which action is  $fg$ ?
  - (c) Draw a Cayley diagram of  $D_4$  using  $f$  and  $g$  as generators.
  - (d) Find all *minimal* generating sets of  $D_4$ . [*Hint*: There are 12.]
5. Pick any integer and consider this set of actions: adding any integer to the one you choose. This is an infinite set of actions; we might name them like “add 1” and “add  $-4210$ ,” etc. This is a group. Find all minimal generating sets. Sketch a Cayley graph for this group using one of these minimal generating sets.
