

1. Let K be a finite field. The *characteristic* of K , denoted $\text{char } K$, is the smallest positive integer n for which $n1 := \underbrace{1 + 1 + \cdots + 1}_{n \text{ times}} = 0$.
 - (a) Prove that the characteristic of K is prime.
 - (b) Show that K is a vector space over \mathbb{Z}_p , where $p = \text{char } K$.
 - (c) Show that the order $|K|$ of K (the number of elements it contains) is a prime power.
 - (d) Show that if K and L are finite fields with $K \subset L$ and $|K| = p^m$ and $|L| = p^n$, then m divides n .

2. Let X be a vector space over a field K and let X' be the the set of linear functions from X to K , also known as the *dual space* of X .

- (a) Let v_1, \dots, v_n be a basis for X . For each i , show there exists a unique linear map $f_i: X \rightarrow K$ such that $f_i(v_i) = 1$ and $f_i(v_j) = 0$ for $j \neq i$.
- (b) Show that f_1, \dots, f_n is a basis for X' (called the *dual basis* of v_1, \dots, v_n).
- (c) Consider the basis $v_1 = (1, -1, 3)$, $v_2 = (0, 1, -1)$, and $v_3 = (0, 3, -2)$ of $X = \mathbb{R}^3$. Find a formula for each element of the dual basis.
- (d) Express the linear map $f \in X'$, where $f(x, y, z) = 2x - y + 3z$ as a linear combination of the dual basis, f_1, f_2, f_3 .

3. Let S be a subset of X . The *annihilator* of S is the set

$$S^\perp = \{\ell \in X' \mid \ell(s) = 0 \text{ for all } s \in S\}.$$

- (a) Show that S^\perp is a subspace of X' .
- (b) Show that $\text{span}(S)$ is the intersection of all subspaces T_α of X that contain S :

$$\text{span}(S) = \bigcap_{S \subseteq T_\alpha \subseteq X} T_\alpha,$$

making it well-founded to speak of the “*smallest subspace of X that contains S* .”

- (c) Let $Y = \text{span}(S)$. Show that $S^\perp = Y^\perp$.

4. Let \mathcal{P}_2 be the vector space of all polynomials $p(x) = a_0 + a_1x + a_2x^2$ over \mathbb{R} , with degree ≤ 2 . Let ξ_1, ξ_2, ξ_3 be distinct real numbers, and define

$$\ell_j: \mathcal{P}_2 \longrightarrow \mathbb{R}, \quad \ell_j(p) = p(\xi_j) \quad \text{for } j = 1, 2, 3.$$

- (a) Show that ℓ_1, ℓ_2, ℓ_3 is a basis for the dual space \mathcal{P}'_2 .
- (b) Find polynomials $p_1(x), p_2(x), p_3(x)$ in \mathcal{P}_2 of which ℓ_1, ℓ_2, ℓ_3 is the dual basis in \mathcal{P}'_2 .

5. Let W be the subspace of \mathbb{R}^4 spanned by $(1, 0, -1, 2)$ and $(2, 3, 1, 1)$. Which linear functions $\ell(x) = c_1x_1 + c_2x_2 + c_3x_3 + c_4x_4$ are in the annihilator of W ? Write your answer by giving an explicit basis of W^\perp .
